RHOMBUS

wheel diameter	reference	replacement wheel
125	CONV KITA	32C125bZ

The Rhombus castor conversion kit provides a quick 'fit and forget' solution to bringing a hospital bed back into service with the minimum amount of downtime...

A bed which is fitted with a central locking system becomes inoperative when either an individual castor or the rod mechanism itself fails. In either event, repairs are time consuming, labour intensive and expensive.

By replacing the whole of the central locking system and complicated castor configuration with a Rhombus conversion kit, the three original modes of operation are retained. This is because each kit includes a set of foot pedal operated castors which carry out the following functions:

- 2 x Total-stop brake castors
- 1 x Directional lock castor
- 1 x Free swivel castor

Also included are:

- 4 x Fixing screws and washers
 - 4 x Adaptor sleeves
- and a full set of instructions for fixing to existing bed tubes without modification

ANTI-STATIC wheels
