

CONTAINER ISO

○ Special fixing for ISO freight containers

Flexell

ISO series castors enable freight containers to be moved quickly and easily without the use of expensive equipment such as cranes, gantries, side-loading forklifts, etc.

The system consists basically of four heavy duty fabricated castors (two swivel and two fixed) fitted with polyurethane tyred cast iron wheels complete with special adaptor plates which lock positively by means of quick action securing screws into the corner casting incorporated into all ISO freight containers.

Quick and easy fixing is facilitated by a special lifting handle and ratchet spanner used for tightening the locking screws.

Each set of ISO series castors includes:

- 2 x Swivel castors complete with locking screws
- 2 x Fixed castors complete with locking screws
- 1 x Lifting handle
- 1 x Ratchet spanner

wheel diameter	tread width	fitted height	load capacity	bearing type	reference per set
250	75	400	10000	taper roller	ISO 210 SUTM
300	100	454	12000	taper roller	ISO 312 SUTM

TOWBARS

An integral part of the towcastor system consisting of two identical fabrications which are 2.45m long and fit into the container corner brackets immediately above the swivel TOWCASTORS.

Supplied in pairs. Order ref **ISO TB**

NOTE: All dimensions are in mm and all loadings in kg unless otherwise stated
